

QuickMIB™

An Automated Meter Read Solution

❖ Painless Meter Reads

❖ QuickMIB™ is a low cost alternative to the comprehensive scanning that the PrintMIB Meter Read Key™ performs.

For office managers, it eliminates the need to collect test pages from every printer on their network.

For leasing companies, it eliminates the traditional problems associated with obtaining meter reads. Account reps no longer have to collect meter reads by means of repeated phone calls, faxes, emails, or trips to the client site. Clients no longer have to collect the data.

There is no possibility of transcription errors: a monthly email provides all the meter information in an easy-to-read HTML report. The report is accompanied by a CSV (comma-separated value) file attachment that can be used with popular desktop applications such as Microsoft Excel.

QuickMIB is downloaded directly to the client PC and runs in the background on a Microsoft Windows server or workstation (XP, 2000, 2003). The office manager or leasing company has the option to select which print devices are included in the reporting. At set intervals (weekly, biweekly or monthly) QuickMIB scans all print devices on the end-users network (up to a class C network of 254 addresses), and sends a report to the specified email addresses (up to four addresses).

New	120.031.306.204	CNBGH...	Hewlett-P...	hp LaserJet ...

❖ Remote Management System

The goal behind QuickMIB is to eliminate the need for imaging service providers to spend time and resources trying to get meter reads from their clients.

The basic component of the solution is a small program that runs on a PC on the client's network. This program collects the meter reads on a pre-determined schedule and sends them to the imaging service provider.

The remote management component allows you to manage clients from our secure web site. For example, you can generate reports before the next scheduled scan. Instead of having to send someone to the client to rerun the reports, or ask the client to run it for you, you'll log onto our secure web site, select the client, and schedule the system to run a new report. When QuickMIB checks for system updates it also checks for instructions from you, and processes them at once. You can also perform almost all of the configuration through the Remote Management System. If you want to add or alter the email addresses to which the reports are sent there's no need to make a trip to your client's office. You can do it all from your desk.

Reduce labor costs associated with manually gathering meter reads

QuickMIB™

An Automated Meter Read Solution

Accurate and Flexible

Details included in the reports:

- Serial Number
- Manufacturer
- IP Address
- Print Device Name
- Page Counts
- Console and Alert Messages

Supported Manufacturers:

- Brother
- Canon
- Dell
- Epson
- Fujitsu
- Gestetner
- Hewlett Packard
- Hitachi
- IBM
- Imagistics
- Konica-Minolta
- Kyocera-Mita
- Lanier
- Lexmark
- OKI Data
- Panasonic
- QMS
- Ricoh
- Samsung
- Savin
- Sharp
- Source Technologies
- Tektronix
- Toshiba
- Xerox

System requirements

- A. Microsoft Windows 2000/XP/2003
- B. TCP/IP
- C. Internet Explorer
- D. During installation: Power user rights or greater on the local workstation. (For subsequent use, only standard user rights are required.)
- E. Internet connection to intended network

100% Money-Back
GUARANTEE
